

a) Resin Bond Diamond Wheels

Depending on the material to be cut or ground, JPT Diamond Wheel has the resin bond matrix to get the job done efficiently and at the lowest possible cost. Our resin bond matrixes are designed for maximum performance which reduces production time and increases profits. Advanced bonding technology provides for the fast free cutting/grinding of even the most difficult to machine materials. Bond matrixes are available for dry, mist and flood applications.

b) Metal Bond Diamond Wheels

JPT Diamond Wheel offers a comprehensive range of metal bond matrixes to handle a wide variety of applications. Our metal bonds are designed with varying degrees of hardness and abrasion resistance to provide maximum performance and long life. The most sophisticated metallurgical techniques and top of the line, premium diamond combines to guarantee maximum productivity and consistency. Our goal is superior performance at an affordable price.
